Faculty guide: Tanu Verma

Shri Ram Group of Colleges

Problem, objectives and scope

One application for finding stays and managing property listings

Visitor objectives

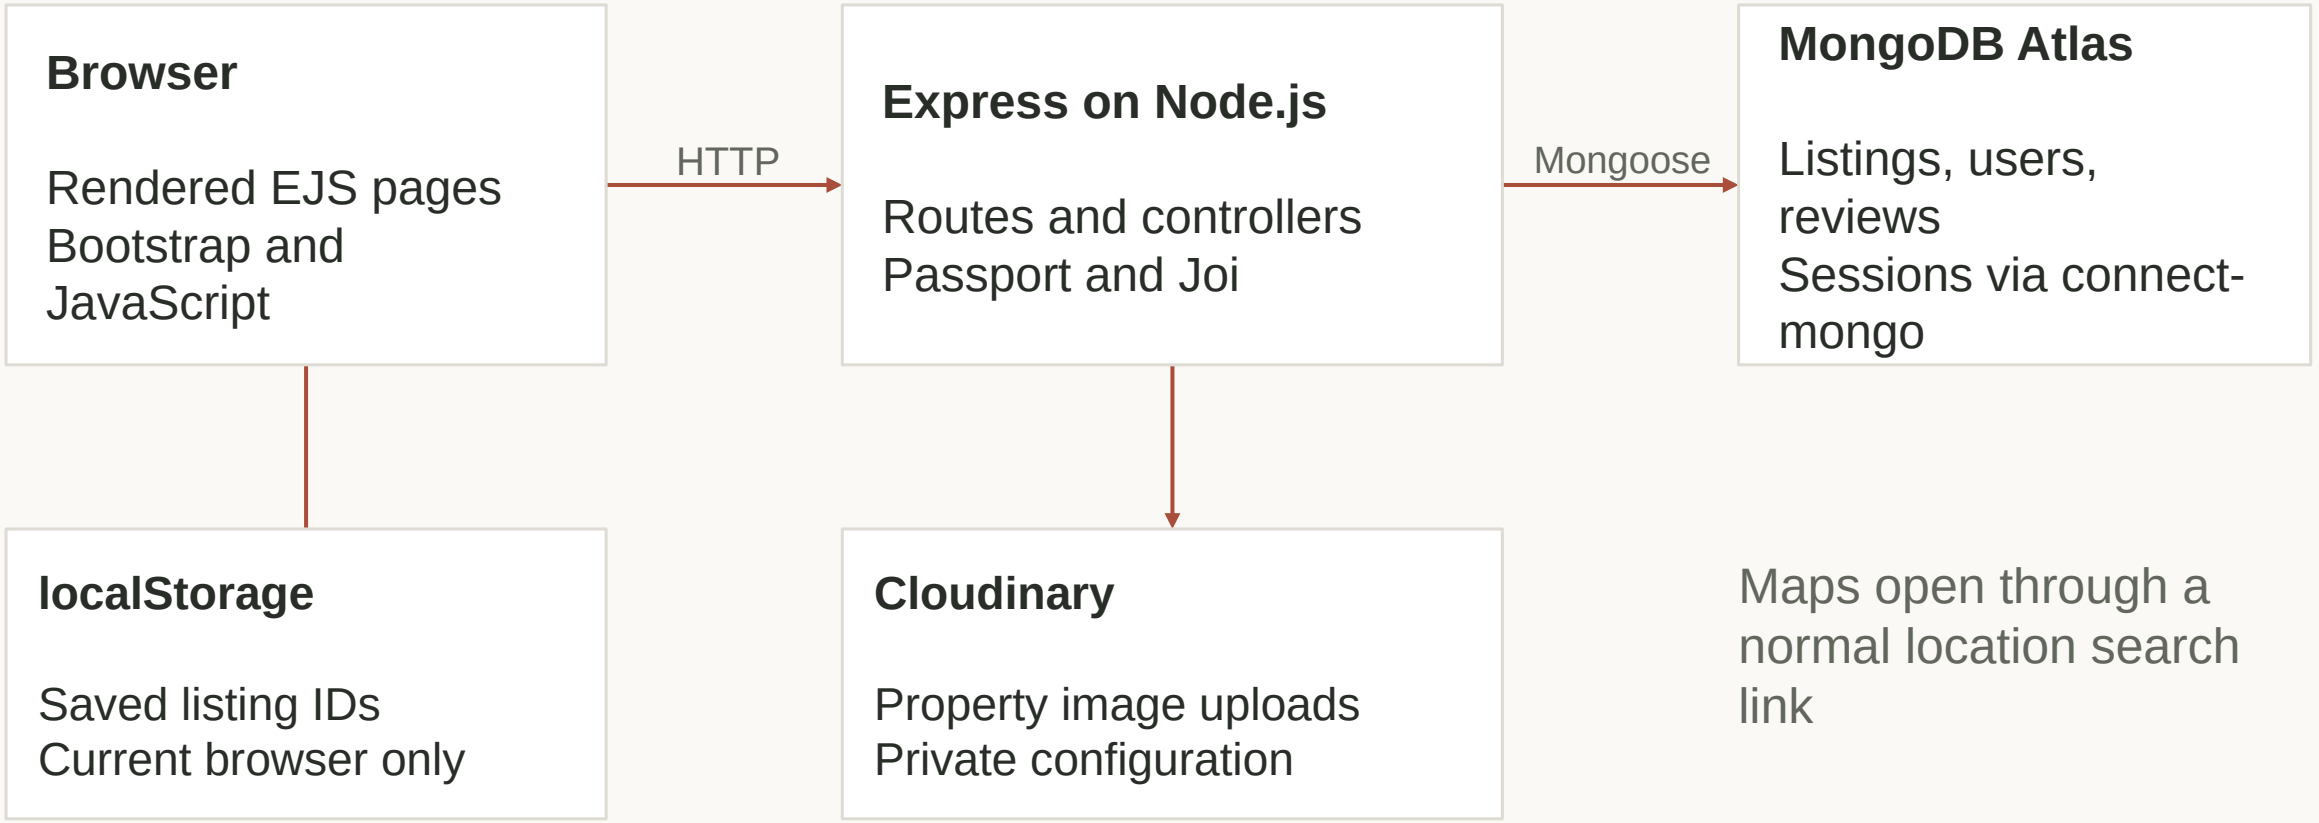

Search destinations, compare nightly prices and inspect property details.

Owner and community needs

Publish and manage owned listings. Read public reviews and sign in to contribute.

Scope: Discovery and listing management. Bookings and payments remain future work.

Architecture and technology stack

Maps open through a normal location search link

Data models: User, Listing and Review, linked through ObjectId references

Key features and interface

Search title, city and country

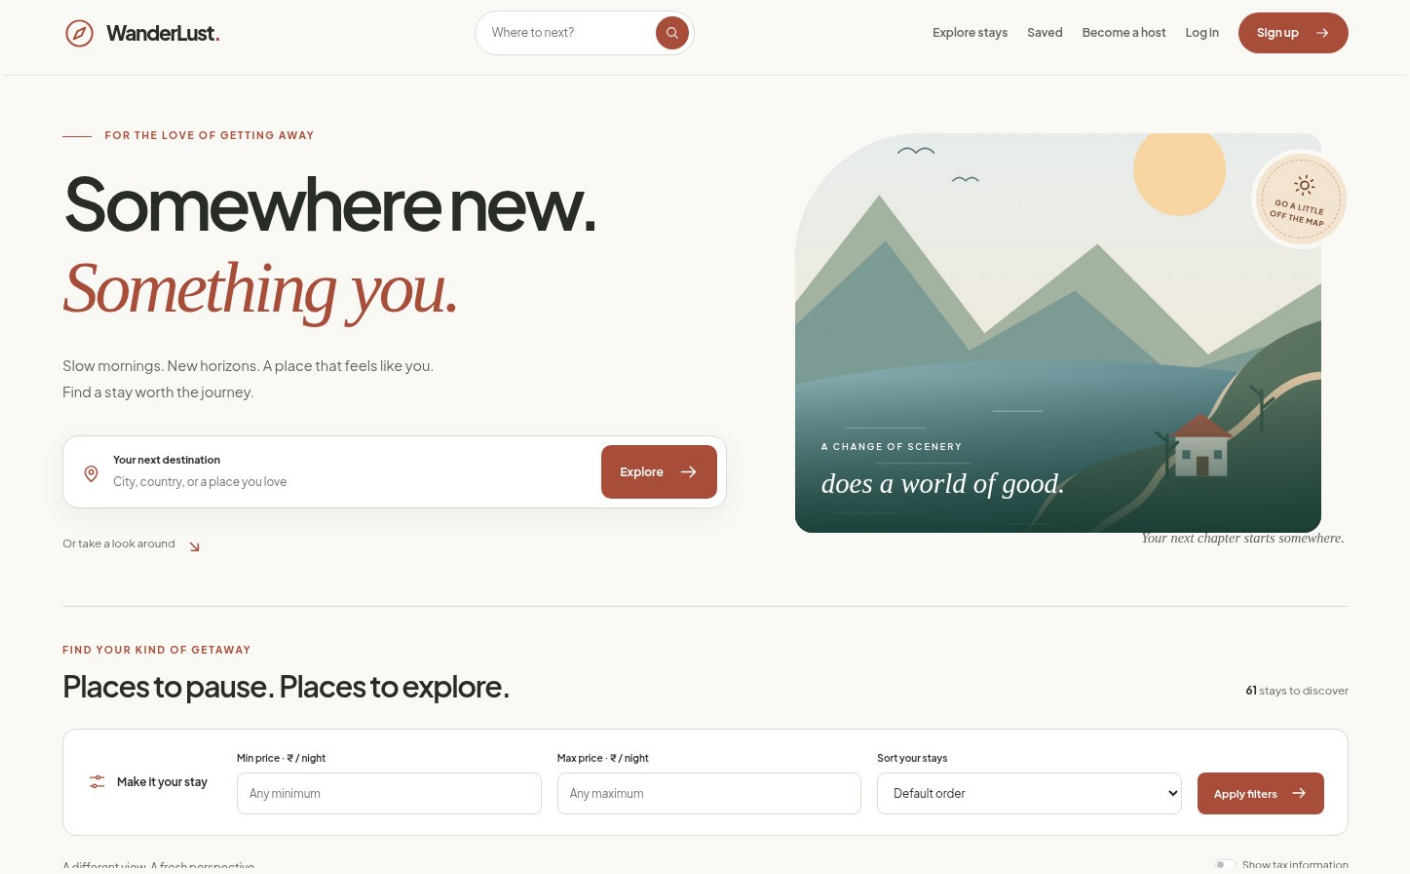

Combine minimum and maximum prices

Sort prices and browse 12 stays per page

Save stays on this device

Sign-in, owner controls and genuine reviews

Maps links and related stays

Local build with EJS, Bootstrap and custom CSS

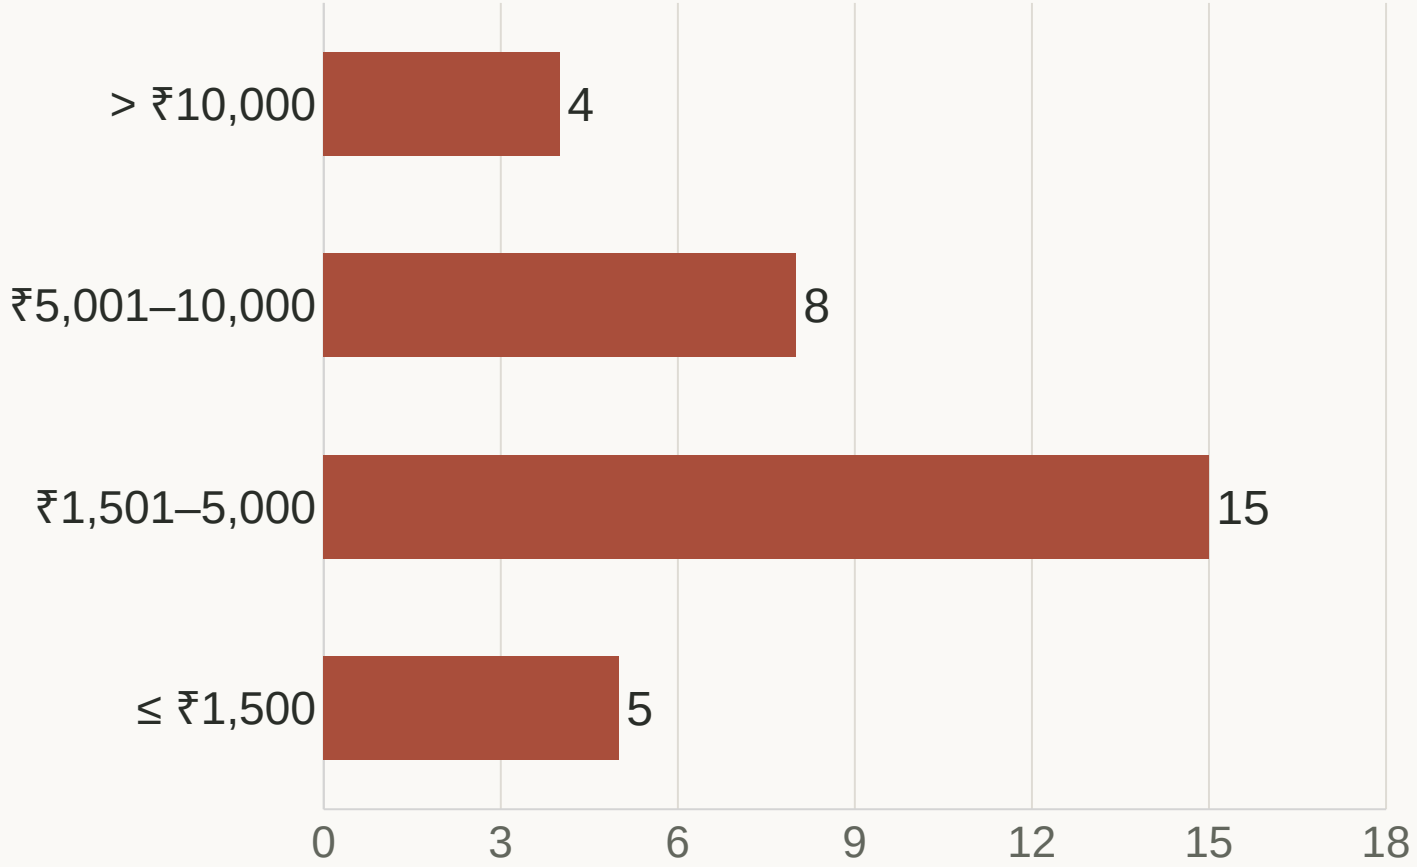

Demo data and search verification

32

demo listings
20 destinations
₹800–₹25,000 per night

Demo data: fictional stays.

Manali, ₹1,000–₹3,000:
2 matching demo listings.

Price-band counts come directly from the 32-record demo manifest

Testing, outcomes and future scope

Test area	Evidence	Outcome
Logic and seed safety	18 unit tests	Passed
Search/filter HTTP	17 valid + 10 invalid	Passed
Pagination	15 result pages	No gaps or duplicates
Responsive layout	45 viewport checks	Passed
Accessibility	20 automated scans	0 automated violations

Outcome: Searchable stays, owner controls and a responsive interface.

Future: Booking availability, payments and account-synced saved stays.
